

Training Tracker

Let Dynamic Works take the administrative task of tracking staff training off your shoulders, and on to our Learning Management System! In order to measure attendance and subject matter competency, we offer a system that is customized to meet the needs of each customer or organization.

Our flexible design – ready for your customization.

From Simple - The Training Tracker can ask a few questions to verify participation at a workshop

To Complex - The system can track a complete set of questions designed to evaluate skills and competencies learned during training sessions.

You design the question and answers and Dynamic Works will set up the Training Tracker. Your staff will have access to their test and transcripts online, anytime. As Training Manager, you will have access to your staff transcripts. Easily keep track of all of your staff training in one place, available anytime.

- Exams are stored within the DW LMS and available to use over and over again
- There is an option to select a “test pool” of questions so that no two tests are alike
- Training Managers are notified of staff progress throughout the year
- There is an option to set expected completion dates and times within the system
- Q&A's available in various formats: T/F; Multiple Choice; Y/N, free text or fill in the blank
- Our design team will provide you with the training and materials you need to get started
